

dbx® DJDI Quick Start

1. Lower the fader, gain/trim control, and enable the mute on the mixer channel(s) you will be connecting the DJDI to.
2. Turn the DJDI's *ATTENUATION* control fully clockwise and connect the DJDI between the instrument and mixer as shown in the diagram to the right.
3. Unmute the mixer channel(s), set the fader(s) to unity gain (0), then raise the gain/trim control(s) until the desired level is achieved without distortion.

NOTE: If distortion occurs, even when the mixer's gain/trim controls are fully lowered, lower the DJDI's *ATTENUATION* control until the signal is distortion free.

4. If a ground hum occurs, try engaging the DJDI's *GROUND* switch.
